GPT-5.6 Luna

Higher and farther left indicates a better score for less cost within each panel.

DeepSWE v1.1

Repository issue resolution

Shared mini-swe-agent. Hollow Astra points use provisional prices.
Fable 5.1: vendor score 67.4%, no exact cost, absent from owner table.

Terminal-Bench 4.0

Terminal tasks · agents differ by provider

Owner leaderboard: 66 tasks, five trials per task.
Scores and costs describe each model together with its agent.

FrontierCode 1.1 Extended

Code quality · weighted rubric

Agent setups differ. No published confidence intervals.
Extended contains Main. These are not independent benchmarks.

Humanity's Last Exam

Artificial Analysis · text only · no tools

2,158 questions. Cost uses owner token counts and displayed rates.
Vendor HLE results with tools are separate rows in Excel.
Fable costs include fallback usage at the fallback model's rates.

AA Intelligence Index v4.2

Artificial Analysis · composite index

The index is not a percentage of tasks solved.
Estimated scores without complete evaluation costs are omitted.

ARC-AGI-3

ARC Prize · semi-private environments

Solid: Standard harness. Dashed: Provider Adapter. Costs are totals.
Astra 'none' research runs are in Excel, not a supported API effort.
Sol costs use its original evaluation prices, without repricing.

Lines connect published effort settings within a model and evaluation setup. Effort labels do not imply equal compute across providers.
Axes use different cost units and score scales. Do not compare slopes or ratios across panels. Missing results are not zero.
Sources: Datacurve, Terminal-Bench, Cognition, Artificial Analysis, and ARC Prize. Exact values, source links, and price assumptions are in Excel.
